Professional Summary

Software Developer with experience in Java, Python, and SQL, specializing in back-end development, cloud computing, and machine learning. Strong problem solving skills with hands-on expertise in Spring Boot, REST APIs, MongoDB, and Agile methodologies. Experienced in designing and deploying scalable cloud-based applications and AI-driven automation solutions for real-world problem-solving., with a track record of impactful projects and certifications from Google and PwC.

Education

NIST University, BTech in Computer Science Engineering	2021-2025
• CGPA: 8.36/10	
Sankalp Senior Secondary School, 12th	2020
• Percentage: 79%	
ST. Xavier High School, 10th	2018
• Percentage: 80%	

Experience

Software Trainee, PwC (Cloud-Based Company)

- Analyzed and optimized a Java-based REST API, handling 10,000+ daily transactions and reducing query execution time by 30%
- Implemented SQL-based database optimizations, improving transaction processing speed and CI/CD, Docker, Kubernetes, AWS Lambda..
- Completed 4 specialized courses (Salesforce, IT Fundamentals, Java Programming, RDBMS) and earned certifications.

Projects

Advance Cyclone Alert System for Weather Forecasting using Deep Learning

- The model was trained on historical weather datasets with 1 Million+ data points, achieving precision in the prediction of the path of the storm.
- Integrated real-time API data from meteorological sources to improve forecast reliability.
- Collaborated with a team of 3 to optimize model performance and deploy the system on AWS cloud infrastructure for scalability.

Custom Object Detection using Machine Learning

- Built an AI-driven custom object detection model using YOLO and TensorFlow, instructed on 5,000+ images.
- Achieved 92% accuracy in detecting vehicles and persons, reducing error rates in real-world applications.
- Collaborated with a team of 4 for data collection, model training, and performance evaluation.

ATM Interface (Java Developer Project)

- Designed and Collaborated an interactive ATM interface using Java and JavaFX, enhancing user experience.
- Implemented multi-threading and OOP principles to improve performance and security.

E-Commerce Chat bot (Machine Learning and NLP)

- Developed an AI-powered chatbot using the RASA framework, increasing the customer response time by 40%.
- Designed an intent-based chat bot architecture and educated it with real-world e-Commerce datasets.
- Successfully integrated with multiple web applications, handling 1,000+ customer queries daily.

Portfolio Website (Full Stack Development)

- Built a personal portfolio website using HTML, CSS, JavaScript, hosted with optimized SEO for better reach.
- Currently showcases 3 projects, generating consistent viewer engagement over the last 3 months.

Technologies

Programming Languages: Python, Java, C, JavaScript

Databases: SQL, MongoDB, RDBMS

DevOps and Cloud: Docker, Kubernetes, AWS Lambda, Jenkins

Backend Development: Git/GitHub, Docker, Postman (API Testing), VS Code

AI/ML: TensorFlow, YOLO, NLP (RASA)

CERTIFICATIONS and TRAINING

Google IT Automation in Python: Google

Java Developer: Oasis Infobyte

Programming Fundamentals – Java: PwC

Salesforce Developer Training: PwC

Demystifying Networking: NPTEL

ACTIVITIES and RESEARCH

Core Member, Foto Folks Club (College's Non-Tech Club)

Hackathon Participant, Code with Maps (Hack 2 Skills) – Sept 2023
